# FUSION VOICE

## DIGITAL DICTATION

The quality of a patient's chart relies upon the clinician's ability to effectively communicate findings, plans and progress. A reliable, accessible and fluid dictation workflow is essential and Fusion Voice® provides this platform.

World-class health systems and community health providers find Fusion Voice can be tailored to meet their needs. The Fusion Voice Dictation System provides a scalable architecture to accommodate growth. An exclusive, fault-tolerant design provides high availability. System partitioning provides a single system image that can be shared by many facilities and departments without compromise.

Transition tools are built in to provide an avenue to reach beyond dictation to speech recognition when the technology is right for your physicians and your infrastructure is ready to support it.

## TRANSPARENT TECHNOLOGY

A series of built-in tools allows even extreme customization to integrate with your existing IT solutions. Instead of teaching your staff how to use the system, teach the system how the users work. Take advantage of keystroke and process savings through simple integrations: let the EMR or PACs workstation identify a study and save scanning a barcode, or download the physician's schedule to their dictation device instead and save pushing buttons, and let Fusion Voice update report statuses to departmental chart tracking systems to save manual data entry.

By providing the features expected by busy users and accommodating a potentially remote, and possibly global workforce, you are ready to meet inevitable change with these advanced dictation solutions.

# WHY CHOOSE FUSION?

## ADAPTABLE

Fusion Voice elaborates on the traditional methods of digital dictation. Support includes telephones, dictate stations, and digital portables as well as dictation options for smart phones, PC-workstations and VoIP. Support one or all in the same installed solution.

## RELIABLE

To ensure business continuity in the event of computer or network failures, our exclusive Fault Tolerant Module (FTM) is essential to mission critical deployments. By distributing the processing and data storage across multiple servers, possibly even in different geographic locations, Fusion Voice provides single-view management with zero downtime expectation.

For disaster proof continuity of care, Dolby offers managed fail-over dictation capability with Dictation Safe™. Whether it's fire, flood, power outage, cut fiber or computer virus, if your system is not accessible by your users, they have an off-site back-up that is always on and available.

## SECURE

An essential component in HIPAA/HITECH planning often has been the ability to manage the need to provide a highly accessible dictation reporting system while maintaining the safeguards required to protect health information.

Fusion Voice logs all events, tracks all access and can even alert you if a breach has potentially occurred. Encryption ensures delivery of dictation from end-to-end without worry.

## FLEXIBLE

Today's healthcare providers must have a revenue strategy. To meet the individual needs of healthcare providers, Fusion offers multiple financial options. Whether you want to buy and own your dictation solution or take advantage of our Software as a Service (SaaS) options called Fusion Live™ or Atom Live™, our cost-effective solutions and return on investment will satisfy the most discerning financial analyst in your organization.

# FUSION TEXT

## MEDICAL TRANSCRIPTION AND EDITING

Highly productive, customizable and completely integrated; these are crucial components essential for every healthcare document management system. Dolbey transcription software is recognized as the industry leader for features and customer satisfaction. Extend in-house functionality to remote workers with ease while maintaining control. Manage reports from dictation to signature and distribution to final document archival in this highly customizable and feature-rich system.

Key components of Fusion Text® enable transcription/editing to work faster and easier with greater precision than ever before. Speed typing, customized formats, medical spell checking and stored routines are highlights of the tool kit and are easy to learn for all transcription staff. Integration with patient registration, demographics and order systems eliminates redundancy while ensuring the integrity of the data as it is passed from Fusion Text to your Health Information System or EMR.

## BEST IN KLAS SPEECH RECOGNITION

**Fusion Speech®** | **BES** powered by Nuance's SpeechMagic™ proves every day that speech recognition is a productivity tool for transcription. Transcription turns to editing when dictations are processed first through the speech recognition engine before reaching transcription. Transcriptionists' edits fine tune

the speech recognition dictionary for continued higher accuracy.

Flexible report distribution reduces manual effort and provides essential audit trails and logs of where and to whom patient information has been sent. Print real-time or to patient floors, fax

## TRANSCRIPTION PRODUCTIVITY

Transcriptionists will experience a significant increase in daily line production by using the Fusion Text productivity tools. Personal and global report normals, medical and pharmaceutical dictionary and spell check, addendum tools, report search and keyboard shortcuts all combine to create an environment for speed and quality.

## MANAGEMENT AND REPORTING

The Custom Management Report features rich data with customized views that focus on tracking productivity, employee time, work volume and trends. Use this tool to design your own report by selecting the columns, grouping levels, sorting, criteria, and various other options. Output detailed lists or create quick executive summaries including color charts and graphics.

to multiple destinations determined by recipient preferences and even email reports to ordering and attending physicians with secure encryption and password protection.

From home, office, hospital or off-site, your clinicians can securely and quickly access

## SYSTEMS INTEGRATION

By integrating ADT and orders data into the Fusion system, transcription will gain productivity while assuring the consistent reliability of chart demographics. After documents are typed, Fusion can send entire reports, report elements or discreet data, to your Electronic Health Record, Health Information System or departmental system. Dolbey's experience has led to established integration with nearly every major software vendor in the healthcare industry.

their reports through an Internet browser. Physicians can view, sign and edit reports to speed document turnaround and availability. With configurable rules, iDocview™ even meets the needs of academic facilities that require multiple signatures and more complex signing relationships.

# DOLBEY

Since 1914, Dolbey has delivered timely solutions with an emphasis on customer satisfaction. Our expert solutions, coupled with 24 hour support, make Dolbey the company to turn to for your fast changing requirements.

## DICTATION, TRANSCRIPTION, SPEECH RECOGNITION & CODING SOLUTIONS

### FUSION SUITE™

Fusion is a healthcare software solution designed to deliver modular digital dictation, transcription, document management, speech recognition, coding and core measures in a single, integrated solution.

Designed for departmental or enterprise-wide deployment, Fusion is the healthcare solution that delivers improved productivity in an end-to-end solution.

### HOW CAN WE HELP YOU?
